

## Wednesday Challenge Form

•Group Members: Jason

•Problem Statement: We have to create a four wheel car that would travel down a sixteen foot ramp

•Approach: I tried to make a car that had four wheels but two of the wheels were apart of a single wheel.

•Solution: My car had scores in the 30's, 110's and 130's. The three wheel technique worked out very well

•Lessons Learned: I learned that I should make a More stable car so that it wouldn't wobble off the ramp
